## Comparing Decimal Numbers

CF 3

**Review:** To compare two decimal numbers, first line up the decimal points. Start by comparing the digits in the biggest number place that is not just zeros. If the digits are the same, move to the next biggest number place (to the right) and compare those digits. Keep doing this until you find that one number has a digit that is greater than the other in the *same number place*. The number with the greatest digit is the greatest (or largest) of the two numbers.

$\begin{array}{r} 0.1253 \\ 0.1271 \end{array}$ <p>line up decimal points</p>	$\begin{array}{r} 0.1253 \\ 0.1271 \end{array}$ <p>biggest digits are the same</p>	$\begin{array}{r} 0.1253 \\ 0.1271 \end{array}$ <p>next digits are the same also</p>	$\begin{array}{r} 0.1253 \\ 0.1271 \end{array}$ <p>here, the bottom digit has the greatest value</p>
